Are you an ecotour guide or naturalist who talks to people about climate change, sea level rise, or adaptation strategies? Do you want to gain confidence when talking about these issues? Join us to learn about strategic framing, a research based approach to communication. Strategic framing helps to engage audiences in thinking productively about how they can participate in creating or supporting climate change solutions. Although this training will focus on climate change, the methods can be applied to any type of science communication.
